**FOR AFRICA GIS CONFERENCE 2019,
18-22 NOVEMBER 2019, KIGALI, RWANDA**

OUTLINE

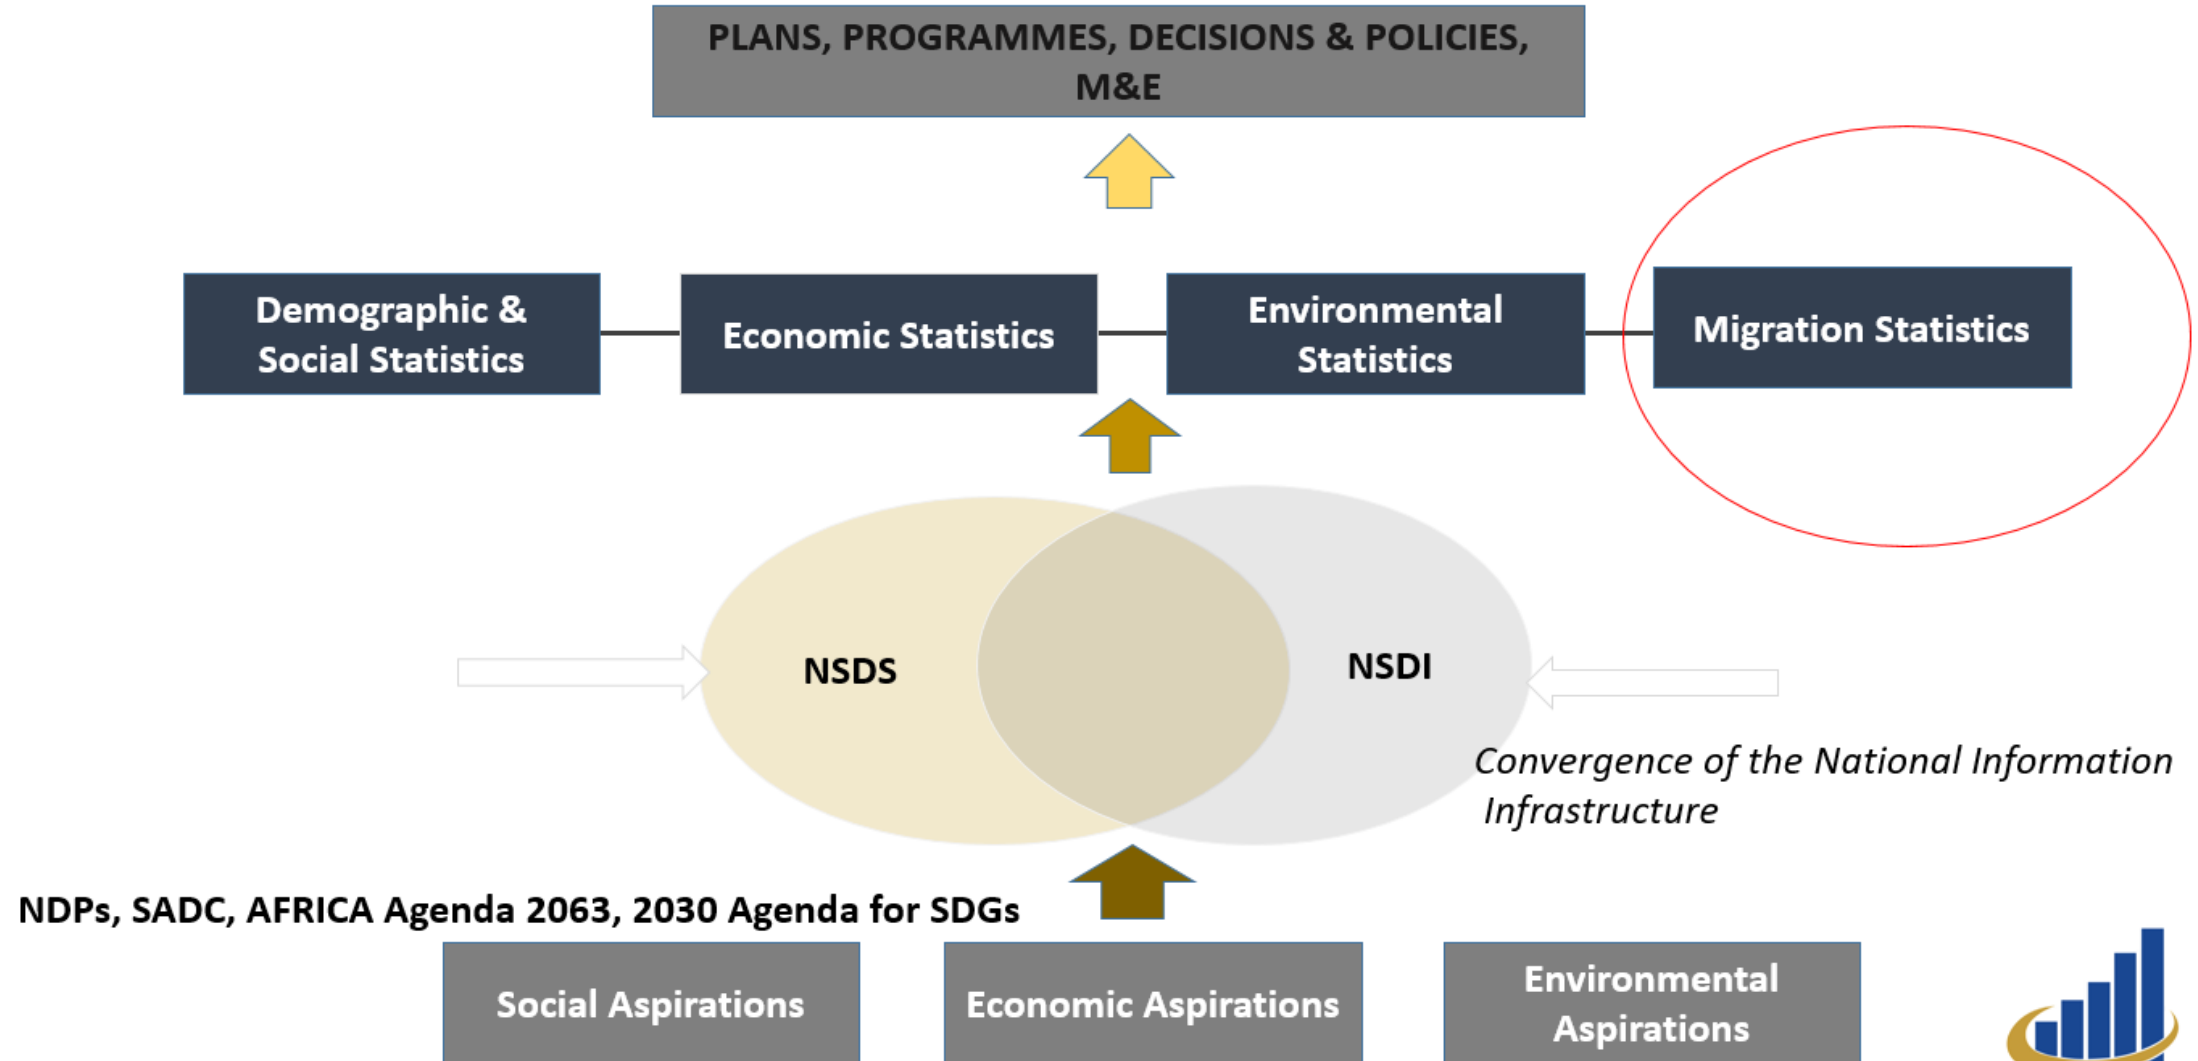

- 1. NSDI LEGAL FRAMEWORK IN NAMIBIA**
- 2. FINDING A SDI MODEL**
- 3. NAMIBIA SDI APPROACH**
- 4. STRATEGY FOR FUNDING**
- 5. CHALLENGES**
- 6. SUMMARY LESSON LEARNED**
- 7. NSDI BENEFITS**

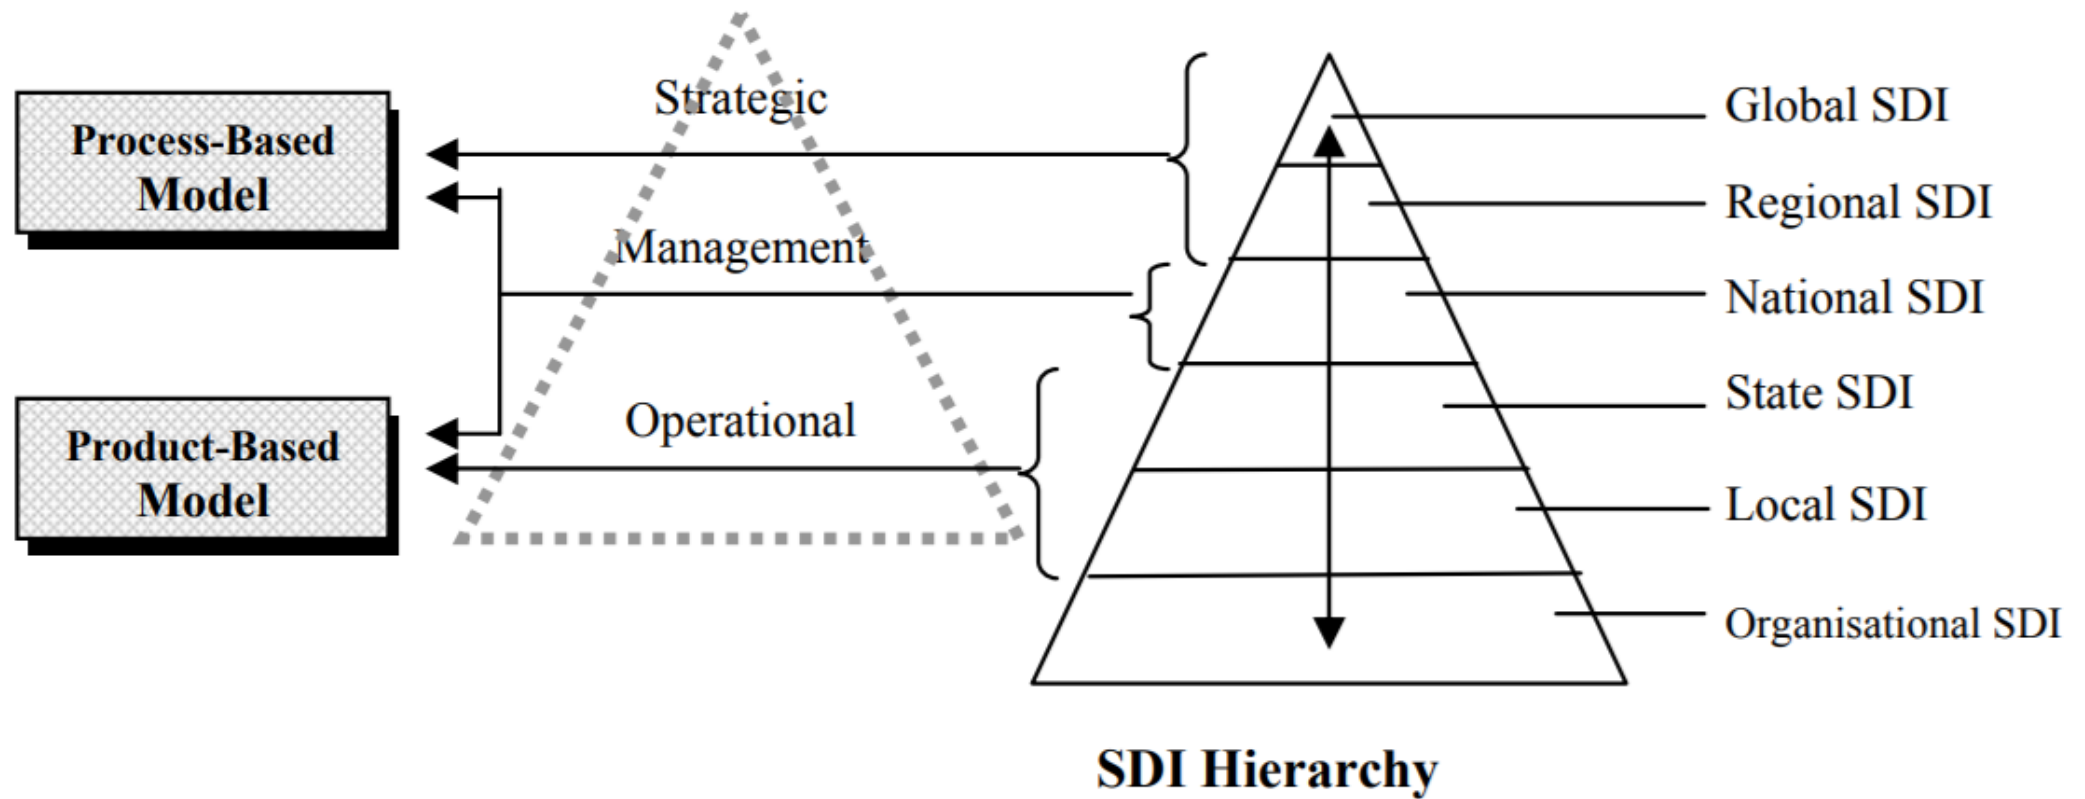

1. NSDI LEGAL FRAMEWORK IN NAMIBIA

- ...fundamentally about **facilitation** and **coordination** of the exchange and sharing of spatial data between stakeholders.
- Statistics Act, No. 9 of 2011

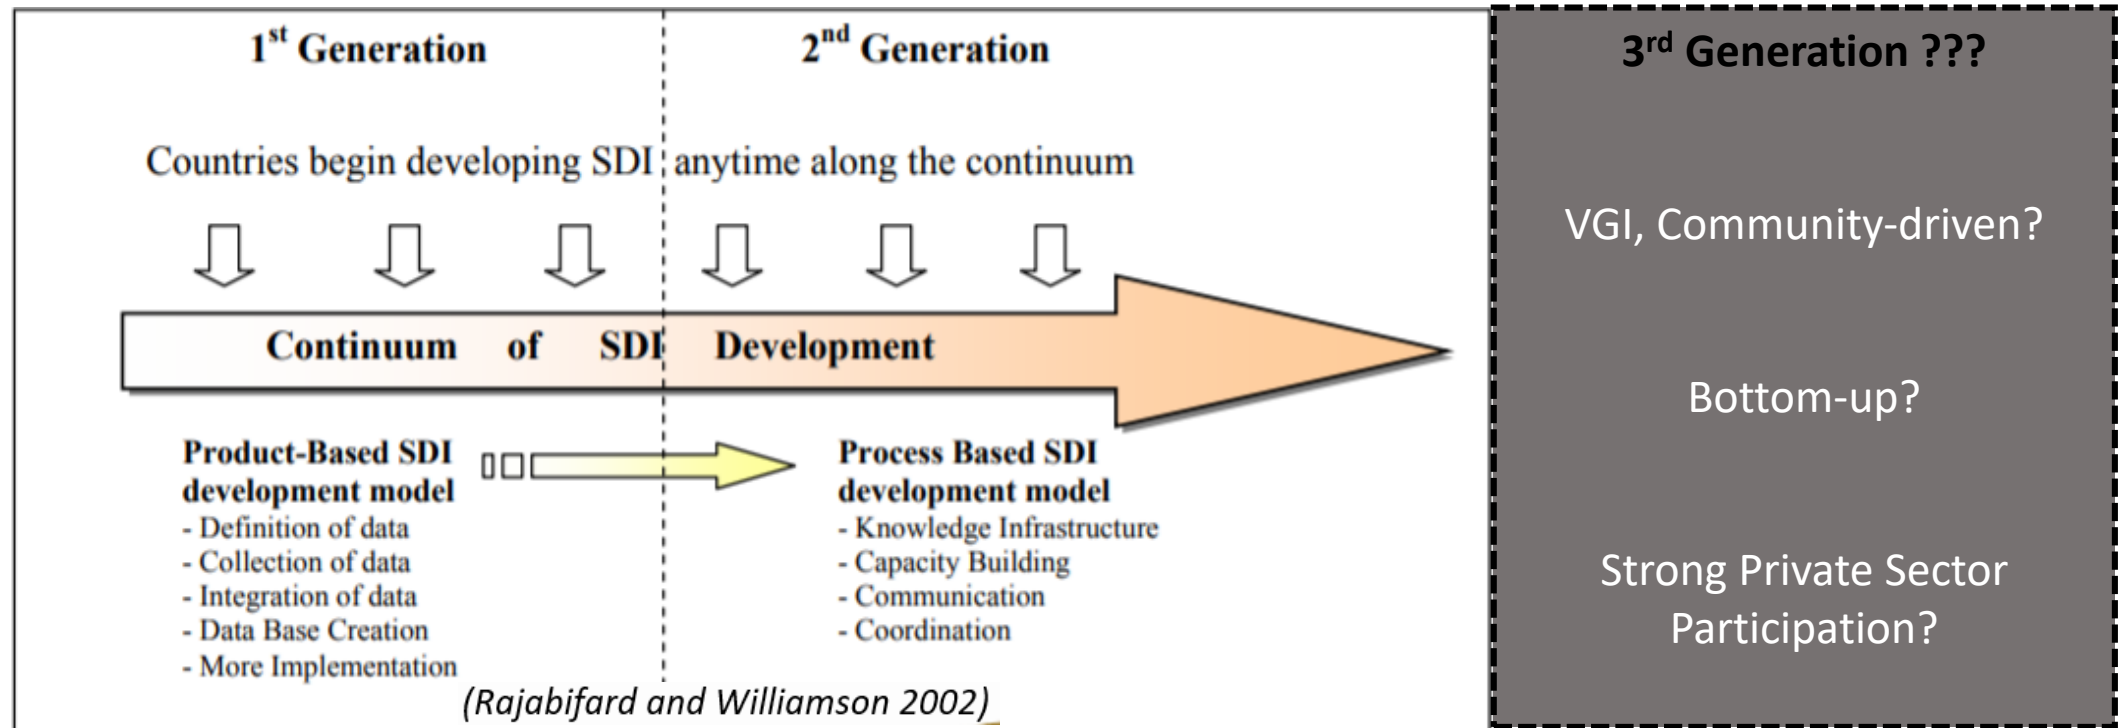

2. FINDING A MODEL

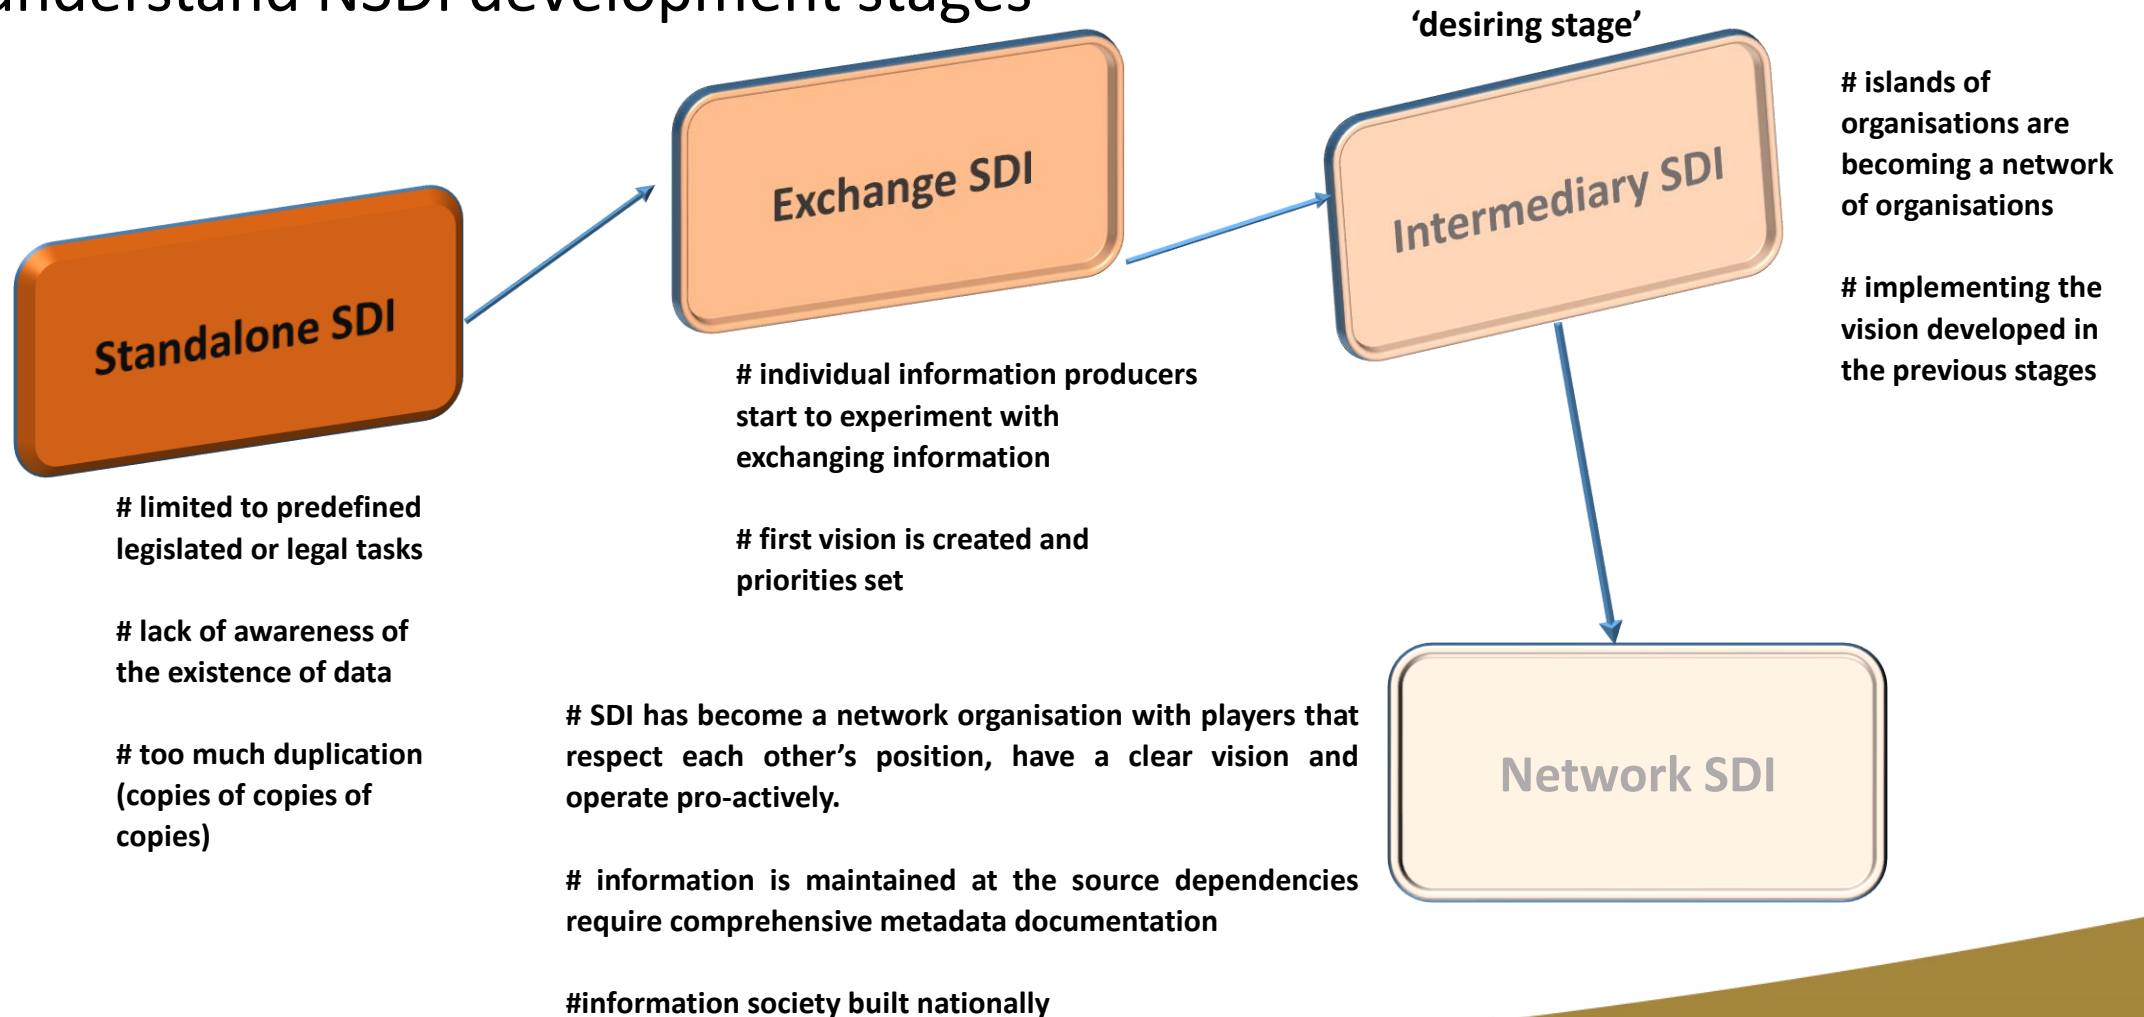

Relationships between SDI hierarchy and different models of SDI development (Rajabifard and Williamson 2002)

1. Product-based model - This model according to Rajabifard (2002) links **data** to **users** through **standards**, **policies** and **technologies** facilitating data access.

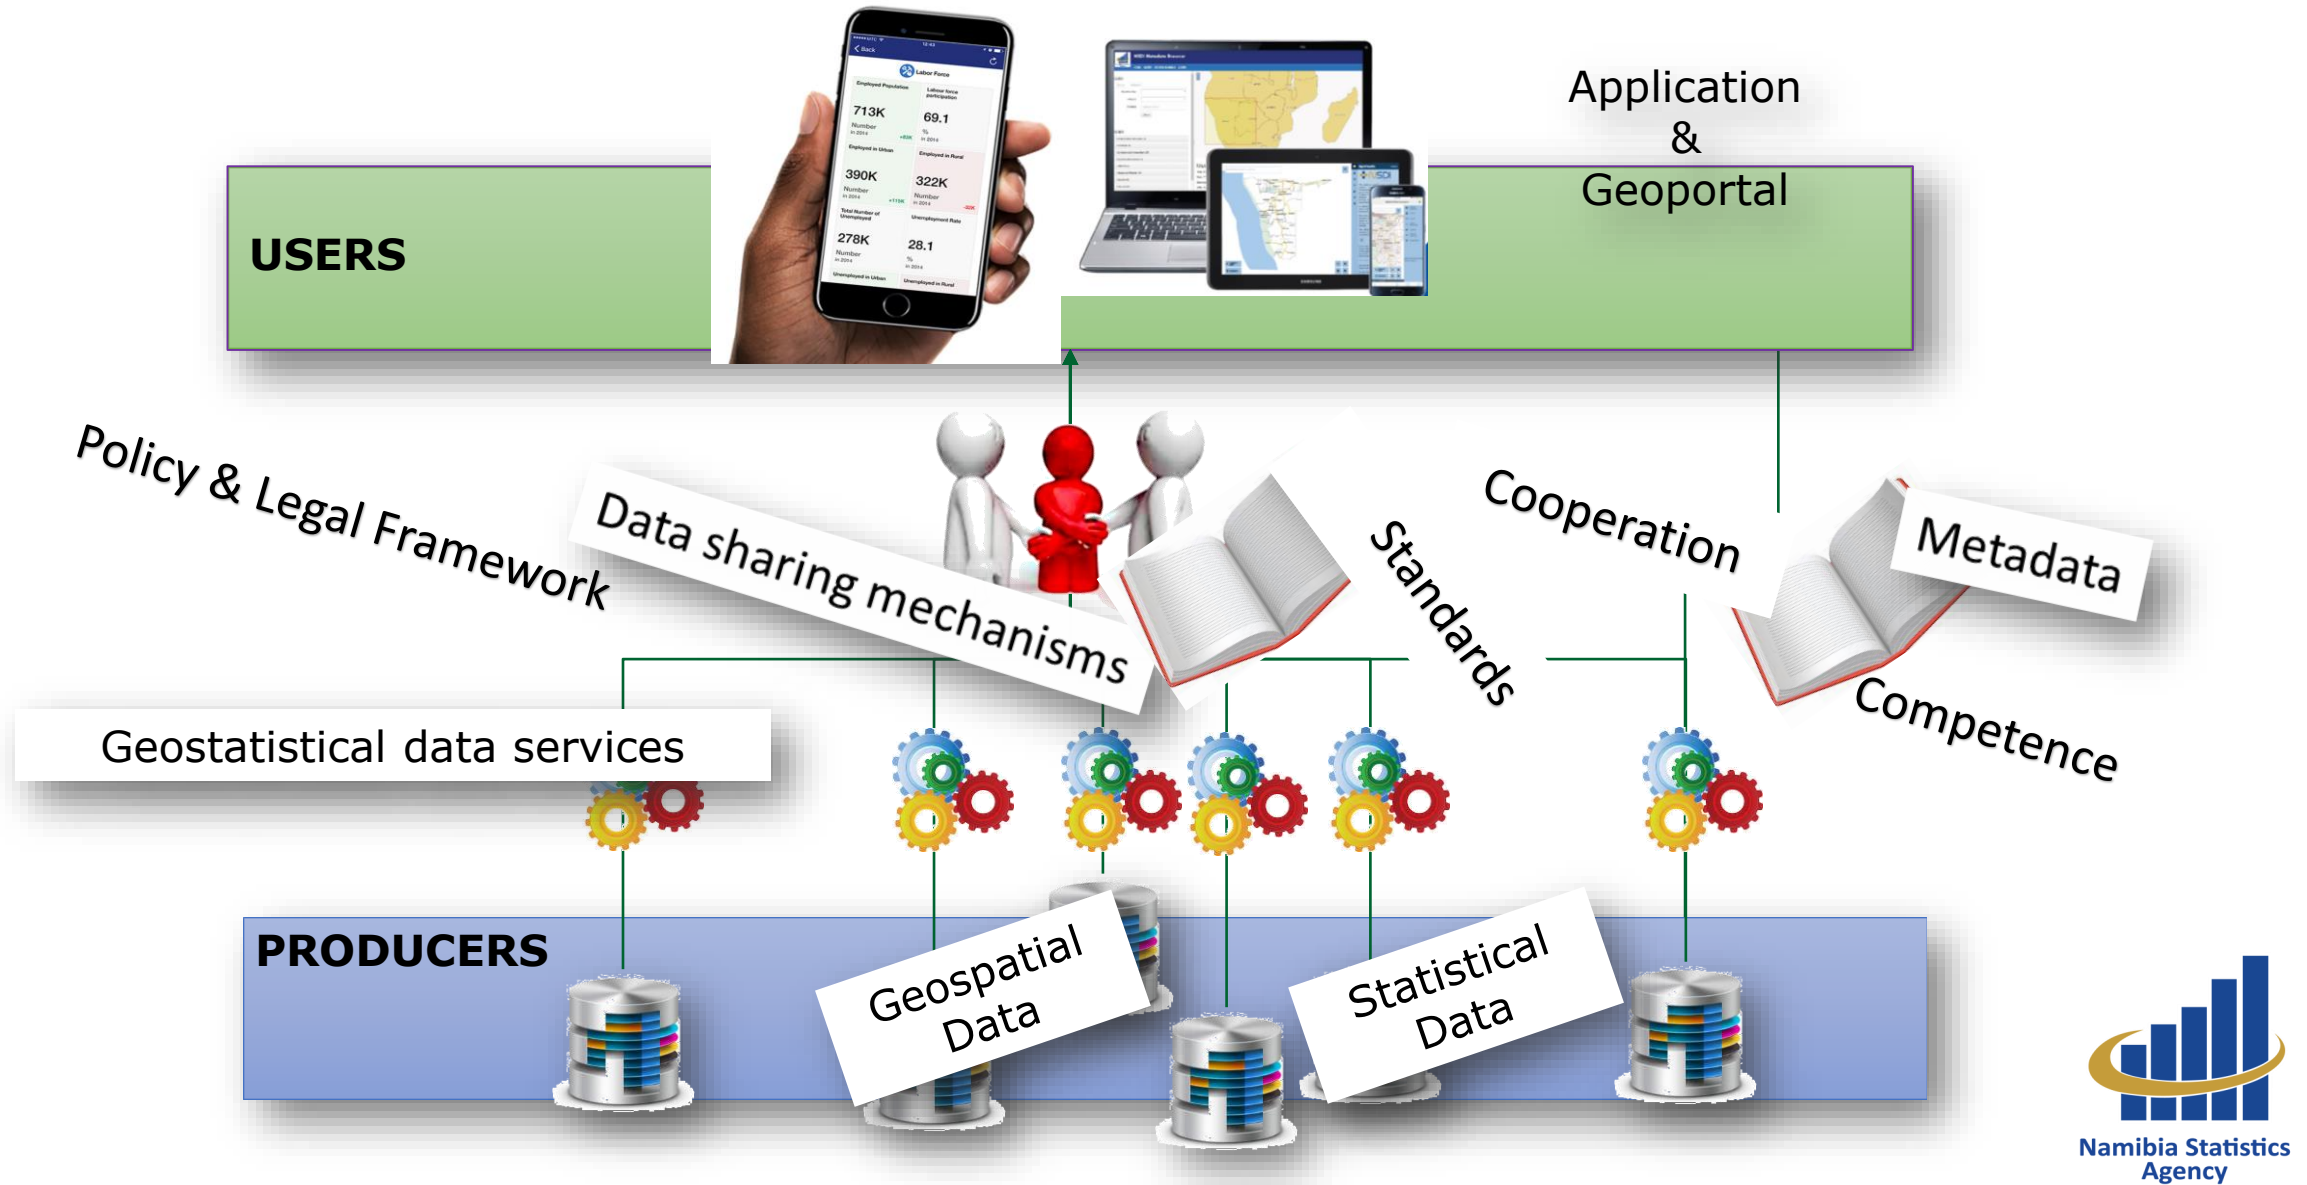

2. Process-based model - emphasises on the different processes within the infrastructure.

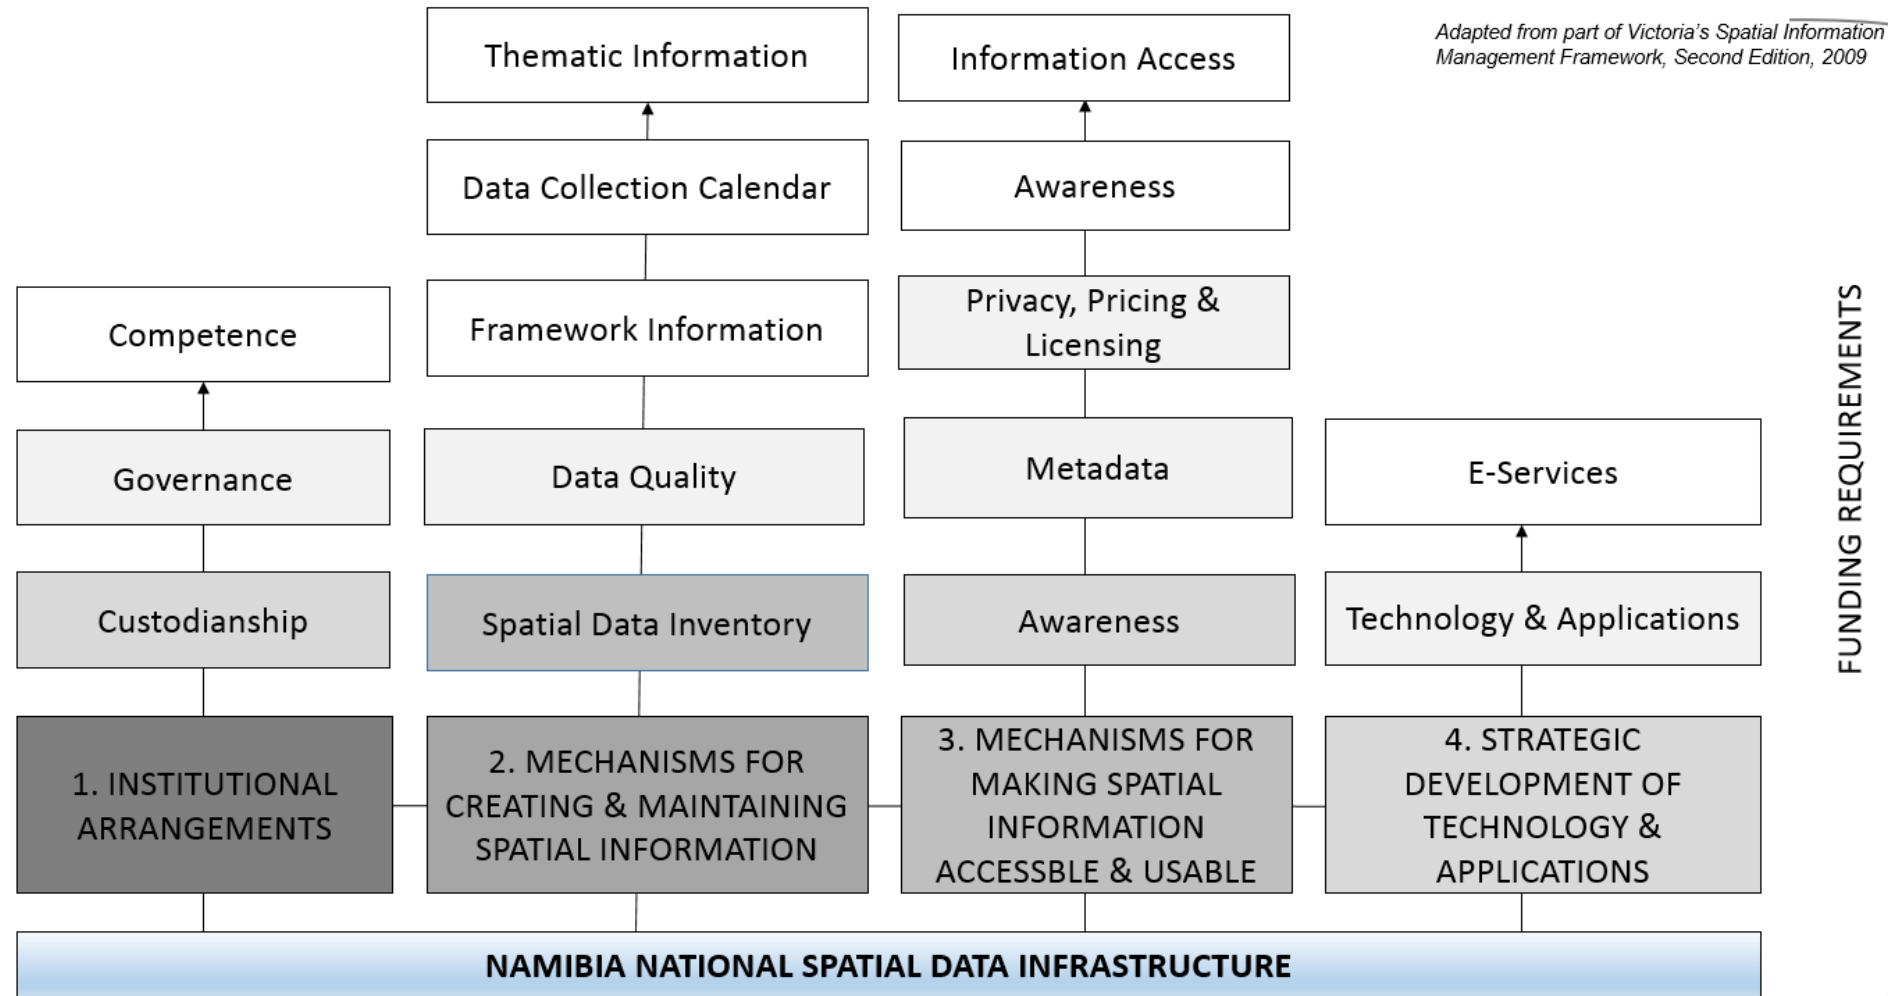

....understand NSDI development stages

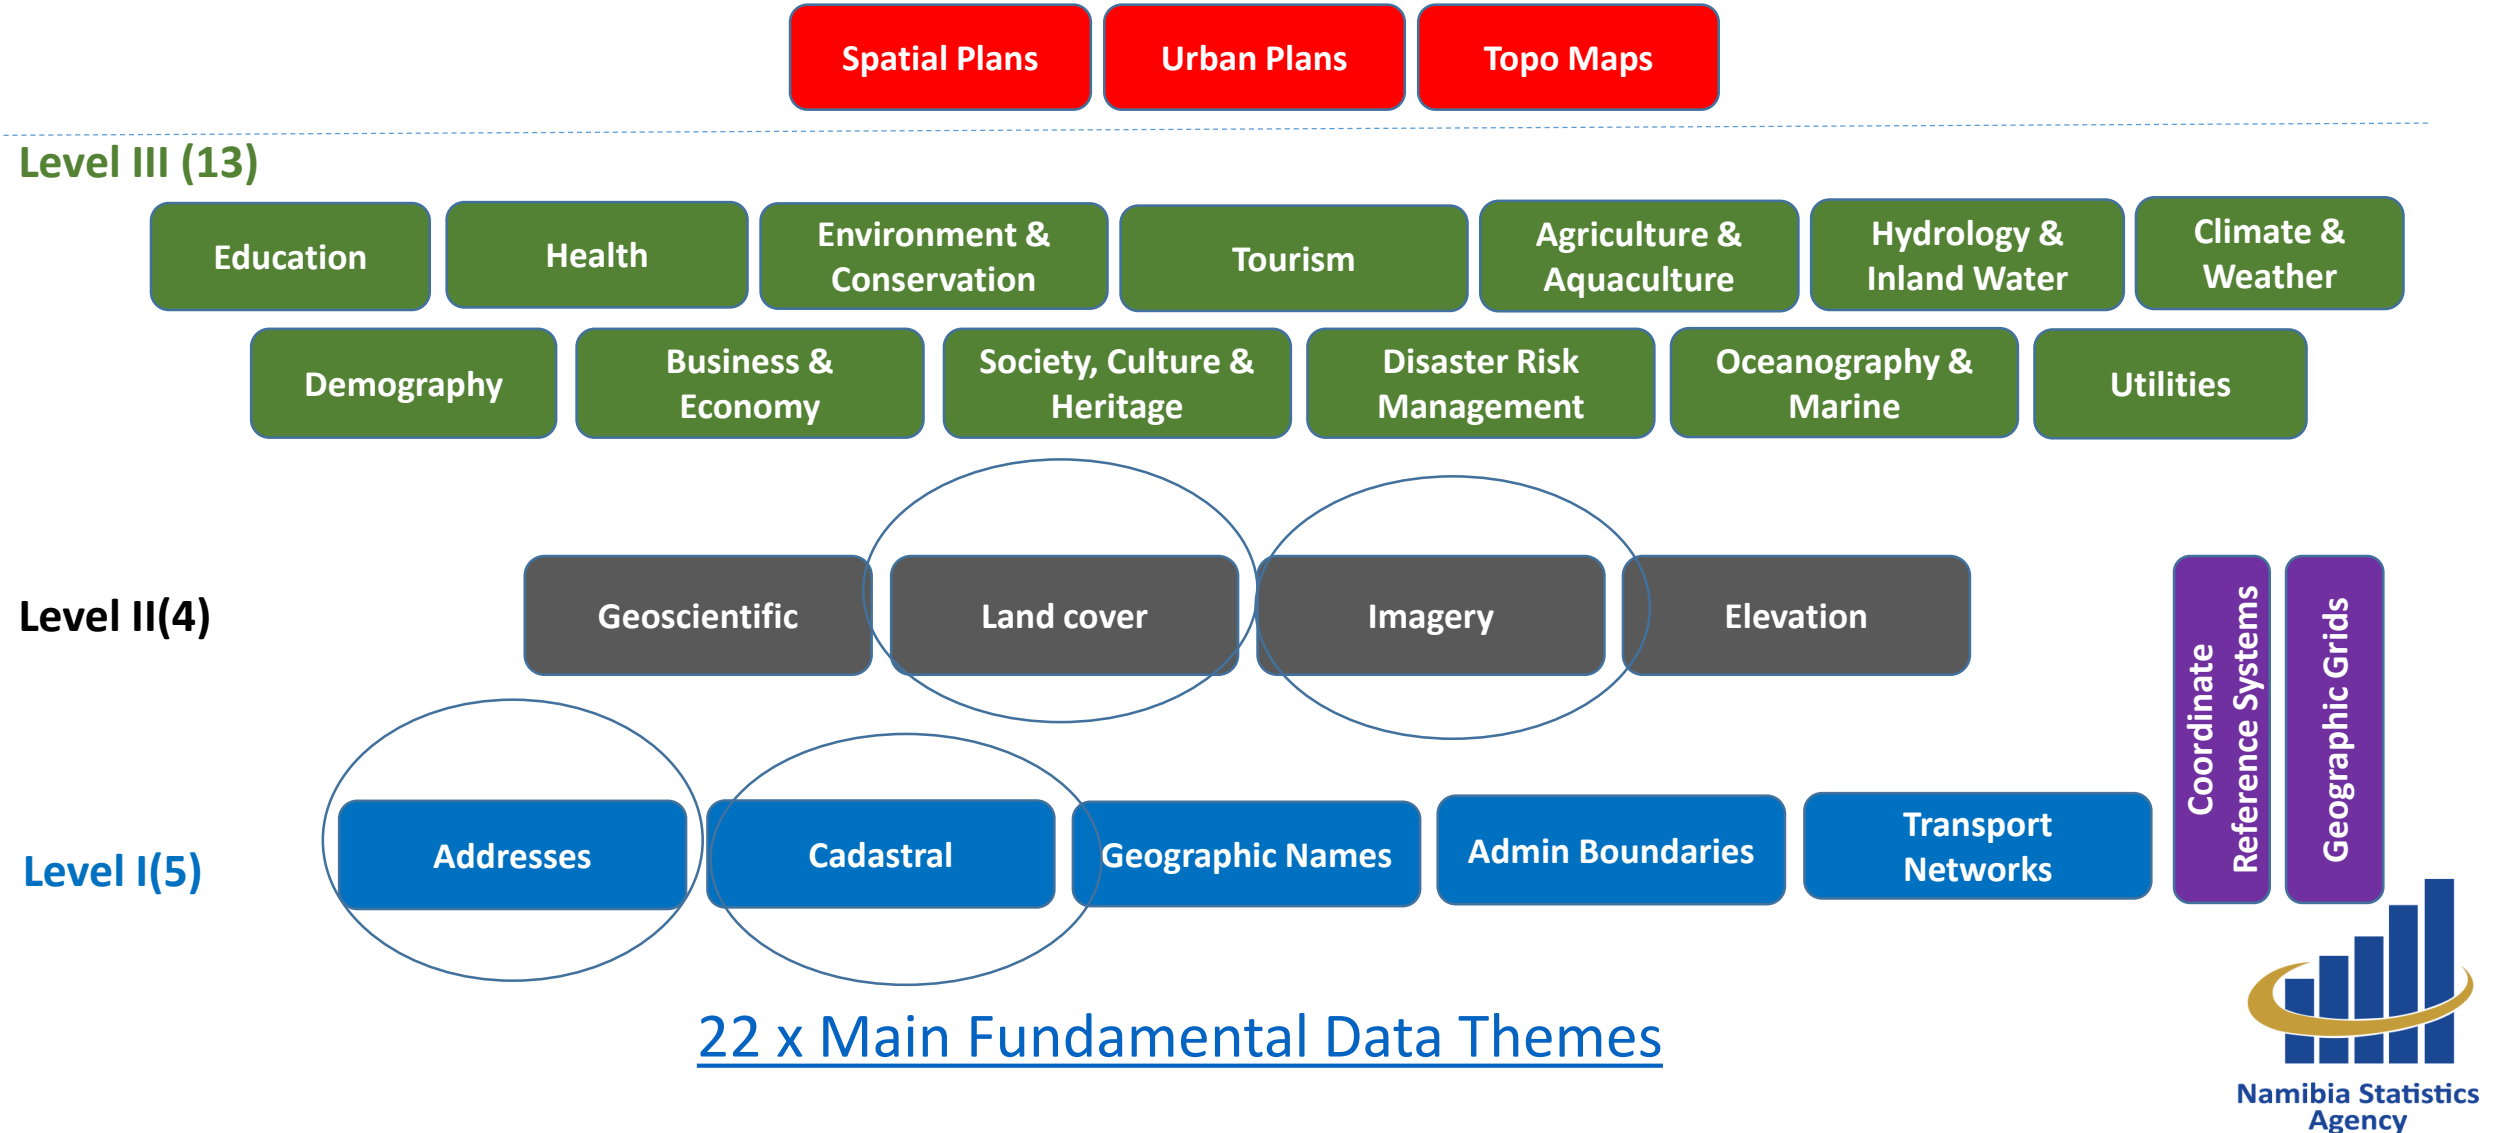

A National Geo-statistical Data Infrastructure

3. NAMIBIA SDI APPROACH

USE OF FUNDAMENTAL GEOSPATIAL DATA THEMES

delivering Right information to planners, decision and policy makers...

- ❖ a list of all structures in the country with a geographic or spatial reference
- ❖ A dot represents a homestead in rural areas and dwelling structure in urban.

Example: Towards Semi-Formal to Formal Addresses

4. STRATEGY FOR NSDI FUNDING

1. Short-term funding

- Government budget (1 – 5 years)

2. Medium-term funding (+5 years)

- To evolve around innovative financing mechanisms:
 - Partnerships;
 - contribution from large stakeholders e.g. utility companies through the NSDI fund;
 - non-monetary contributions (technical personnel, donations, etc.);
 - grants from development partners;
 - alignment of SDI activities to special national projects;
 - licensure.

3. Long-term funding model (+10 years)

- Private sector investment
- capital investment
- re-investment of returns (royalties, sales, charges, etc.)
- special taxation (taxes on geo-ICT products and services).

5. CHALLENGES

1. Incoherent legal and policy frameworks – makes it difficult to coordinate
2. Digitalisation of land records; outdated data; no data maintenance plans
3. Limited capacity (technical & human)
4. Overcoming scepticism – privacy & confidentiality issues of geospatial information
5. Raising political awareness.

5. LESSON LEARNED

Coordination is one of the most important aspects in the development of an SDI,... [and includes]

- leadership,
- mediating inter-agency conflicts,
- sustaining political support,
- selling the benefits to multiple audiences,
- providing technical guidance and enforcement of common standards,
- raising awareness and disseminating the results.

"Partnerships and communication are the heart of SDI" (SDI Africa, 2010).

- “political support.”
- “partnership”

Mwungu (2017)

- Awareness;
- commitment building;
- policies;
- directives and actions;
- institutional framework;
- funding and SDI implementation

7. NSDI benefits to sell at national level?

To the respondents:

1. Better service delivery and policies
2. Possibility to own a formal address
3. Emergency response e.g. shack fires, floods, drought, crime, etc.
4. Access to financing e.g. addresses

To the policy and decision makers:

1. All of the above plus
2. Better tax collection
3. New businesses, new markets, more government revenue
4. Accountability and transparency (leave no one behind) – win the election

To the data producers:

1. Better data management, data-driven decisions
2. Quality, timely and accessible national data
3. Motivation for state funding
4. Enhanced data sharing through partnerships, focus on core business
5. Elimination of duplication, reducing costs
6. Capacity, economies of scale

Thank You
